

MAPA CORPORATE OPERATING SYSTEM

DECISION NAVIGATION MAP

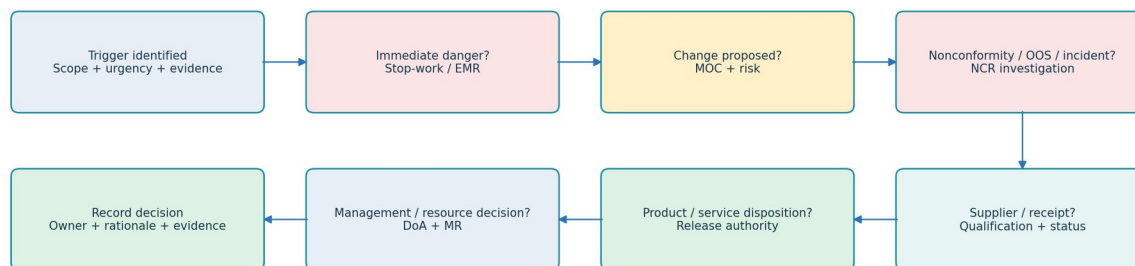

Choose the correct authority, control path and decision record

Document code	MAPA-IMS-NAV-002
Gate / package	GATE-001 / Package-001 READ FIRST
Version / issue	1.0 / 08 August 2026
Owner	General Manager / QA-QC & IMS Manager
Applicability	All MCOS decisions across SARL MAPA and business lines
Status	Controlled Issue - GM activation approval required

DECISION RULE The event owner may propose and execute within authority, but cannot self-approve a decision that requires independent QA, HSE, IT/OT, technical or management verification.

1. Decision Triage

Select the governing decision path

No route ends at verbal agreement. Every material decision requires a controlled record.

Figure 1 - MCOS decision triage and evidence endpoint.

2. Trigger-to-Control Matrix

Trigger	First decision	Governing control	Authority	Required record
Immediate danger, spill, fire or uncontrolled energy	Stop work; protect people/environment; notify	MAPA-HSE-PRO-EMR; applicable PTW/LOTO/emergency records	HSE / incident commander	Safe status; HOLD or controlled restart
Planned, temporary, emergency or recovery change	Screen change and integrated impact	MAPA-IMS-PRO-MOC + MAPA-IMS-PRO-RSK	Change owner + QA/HSE/technical reviewers	PASS / HOLD / REJECT / ROLLBACK
NCR, OOS, incident, complaint or data-integrity event	Contain; preserve evidence; investigate	MAPA-IMS-PRO-NCR	Process owner + independent verifier	Disposition + CAPA / no-CAPA rationale

Trigger	First decision	Governing control	Authority	Required record
Supplier or external provider decision	Qualify, approve source, control PO and performance	MAPA-SCM-PRO-SUP	SCM + QA + technical owner	Approved / conditional / suspended / rejected
Receipt, warehouse status or material use	Identify, inspect, segregate and preserve	WHS records + incoming acceptance criteria	Warehouse + QA/QC	ACCEPT / HOLD / REJECT
Product or service release	Review dossier against acceptance criteria	MAPA-QA-PRO-REL	Authorized independent release role	RELEASE / HOLD / REJECT
Policy, resources, unresolved risk or system performance	Escalate with evidence and options	MAPA-IMS-PRO-MR + governance decision register	GM / delegated DoA level	Decision, resource, owner and due date

3. Authority and Veto Model

Level	Decision class	Typical boundary	Accountable authority	No-go
D1	Routine execution	Approved SOP/plan and available resources	Supervisor / authorized operator	No deviation, no critical risk
D2	Functional decision	Cross-functional but contained impact	Function manager / process owner	QA/HSE/technical review where applicable
D3	Major / significant decision	Material quality, HSE, environment, compliance, continuity or reputation impact	Technical Director / GM delegate	Independent review; no open critical FAIL
D4	Strategic / irreversible / high exposure	Corporate scope, major capital, serious legal or external commitment	General Manager / Board authority	Formal decision record and implementation gate

4. Mandatory Decision Record

- Unique decision ID and linked event, change, risk, NCR, lot, supplier, contract or system reference.
- Decision date/time, named decision maker, delegated authority and independent reviewers.
- Options considered, evidence reviewed, assumptions, dissent or veto and decision rationale.
- Decision status: PASS, CONDITIONAL PASS, HOLD, REJECT, RELEASE, ROLLBACK or CLOSE.
- Conditions, action owner, due date, acceptance evidence, escalation and re-open trigger.

5. GATE-001 Decision Chain

Decision	Decision point	Rationale	Evidence family	Result
DEC-001	Contain INCIDENT-001	Protect scope and evidence	Immediate containment	Accepted
DEC-002	Classify as Major Investigation	Multi-domain event; root-cause and recovery proof required	MAPA-IMS-PRO-NCR	Accepted
DEC-003	Maintain HOLD	Recovery not yet independently verified	Decision record + evidence gap	Accepted
DEC-004	Accept trusted recovery and reconciliation	Scope, data/interface checks and return-to-service evidence complete	IT/OT / process verification	Accepted

Decision	Decision point	Rationale	Evidence family	Result
DEC-005	Open CAPA and horizontal deployment	Recovery closure does not prove recurrence prevention	CAPA / lessons record	Accepted
DEC-006	Close GATE-001	Eight-part gate file retrievable; open actions owned	Gate closure record	PASS

6. Decision Failure Modes

- Verbal approval without a controlled decision record.
- The executor self-approves release, recovery or effectiveness.
- Conditional PASS is used to bypass an unknown or critical FAIL.
- Commercial urgency is treated as acceptance evidence.
- The decision record is complete but the source evidence cannot be retrieved.

Revision History

Version	Date	Change	Authority / record
0.1	06.08.2026	GATE-001 simulation working content	Simulation baseline
0.9	07.08.2026	Gate closure; navigation and case route frozen	GATE-001 PASS
1.0	08.08.2026	Initial controlled Document Package issue	CN-2026-0001

Approval and Activation

Stage	Role	Decision condition	Status / date
Prepared	QA/QC & IMS Manager	Content and traceability complete	08.08.2026
Reviewed	Technical Director / Functional Owners	Controlled review required	Open
Approved	General Manager	Required before live operational activation	Pending
